

Catch::Matchers::Impl
::MatcherUntypedBase

Catch::Matchers::Impl
::MatcherMethod< ObjectT >

Catch::Matchers::Impl
::MatcherBase< ObjectT,
ComparatorT >

```
graph LR; A[Catch::Matchers::Impl<br>::MatcherBase< ObjectT,<br>ComparatorT >] --> B[Catch::Matchers::Impl<br>::MatcherUntypedBase]; A --> C[Catch::Matchers::Impl<br>::MatcherMethod< ObjectT >];
```

The diagram illustrates the class hierarchy for Catch2 matchers. A central gray box on the right represents the base class, `Catch::Matchers::Impl::MatcherBase< ObjectT, ComparatorT >`. Two white boxes on the left represent derived classes. Blue arrows point from the gray box to each of the white boxes, indicating inheritance. The top white box is `Catch::Matchers::Impl::MatcherUntypedBase`, and the bottom white box is `Catch::Matchers::Impl::MatcherMethod< ObjectT >`.
