

std::false_type

std::conditional::type

testing::internal::
disjunction< P1, Ps... >

```
graph BT; A[testing::internal::disjunction< P1, Ps... >] --> B[std::false_type]; A --> C[std::conditional::type];
```

The diagram illustrates a relationship between three C++ type names. At the bottom is a gray box containing the text 'testing::internal::disjunction< P1, Ps... >'. Two blue arrows originate from the top corners of this box. The left arrow points to a white box at the top left containing the text 'std::false_type'. The right arrow points to a white box at the top right containing the text 'std::conditional::type'. This suggests that the 'testing::internal::disjunction' type is a specialization or inherits from both 'std::false_type' and 'std::conditional::type'.
